

Intelligence The Creative Response to Now by Osho

Osho's "Intelligence" challenges the notion that intellect is the key to promoting intelligence. He argues that intellect is logical, while intelligence is paradoxical. Rather than dissecting things, intelligence puts them together to understand the whole. By exploring this distinction, the book urges readers to be more aware of how they approach and solve problems—logical, emotional, and practical—in order to respond creatively to the challenges of our changing world.
