

Telepsychics by Dr Joseph Murphy

Telepsychics is a term often used to describe individuals who claim to have the ability to perceive information or communicate with others over long distances, without the use of conventional sensory means. This concept is closely tied to the broader field of parapsychology, which studies phenomena that cannot be explained by conventional scientific understanding.

Key Concepts Associated with Telepsychics

- **Telepathy:** The ability to transmit or receive thoughts or feelings directly from one mind to another.
- **Clairvoyance:** The ability to perceive information or events that are not directly visible or accessible to the senses.
- **Psychokinesis:** The ability to influence physical objects or events with one's mind.

Changemakers often read this book because it provides valuable insights into the psychology of persuasion. Understanding how people are influenced can help them craft more effective messages and strategies for social change. Additionally, the book can offer guidance on overcoming resistance and building consensus.
